

Disney • PIXAR INSIDE OUT

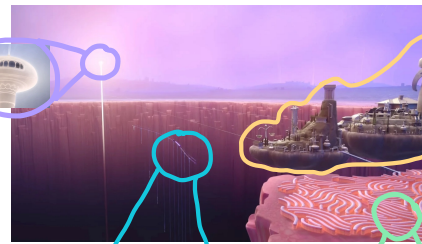

Riley's EMOTIONS

Headquarters
This represents the Amygdala. The Amygdala is in charge of handling strong emotions.

Inside RILEY'S Mind

Train of thought
This represents Riley's consciousness as it travels around her brain.

Personality Islands.
These are the Islands that make up Riley's personality.

Long term memory
This represents the cerebral cortex which is in charge of storing memories and thinking.

When Riley is a baby her emotional control panel is very simple. This is most likely because her mind, emotions, and thoughts are simple.

As Riley gets older, however, her emotions get more complicated. She doesn't just feel an emotion, she has thoughts that go with it. At the end of the movie we see one more change in her emotional control panel. It is more complicated because her emotions and thoughts are more complicated.

Sadness

In an effort to keep Riley happy, Joy draws a circle on the ground and tells Sadness to stay inside of it. Sadness saves Riley by making her miss her home. The movie teaches us to accept sadness.

MULTI COLORED Memories

The first multi-colored memory appears when Riley comes home after running away. A blue and yellow memory orb rolls down the chute. Riley felt sad and happy at the same time during this memory. Soon most of the memories in headquarters are multi-colored memories. This means Riley's emotions are working together.

Inside Out teaches us the importance of staying true to ourselves and accepting change. It teaches us how our brain functions and why we react in certain ways. We have to have an open mind and listen to our heart as well as our head.
