

If you don't know I gen hate horoscopes and the Scorpio and Gemini type stuff, I don't believe in it and I don't like how people treat it

But Enneagram... might be accurate at least for me it's spot on, for both the one the teacher made me do and the MBTI stuff I did forever ago

It might also be just vague things everyone relates to but idk

Also **I'm kinda sad because I can never find another ESTP or Type 7..** idek if others exist

I have never heard of the number types before and I'm still judgemental of them just bc it's not MBTI even though it's accurate for me and both enneagrams line up
