

Use the data to select the correct line plot. Then answer the question.

Liliana needs to buy beads for a necklace. The beads are sold by mass. She sketches a design to determine what beads are needed, and then writes down their sizes. The sizes are shown below.

What is the combined mass of all the beads? What is the average mass of the beads?

$7 \div 15 = \frac{7}{15}$
 $\frac{7}{15}$ g Average
 $\frac{4}{5} + 2 + \frac{1}{5} + 2\frac{2}{5} = 7$
 total = 7 g
