

A man has a rabbit, some lettuce, and a fox. He comes to a river. He finds a boat on the shore, but there is only room for him and one of his items. How does he get everything over? (If he leaves the fox and the rabbit, the fox will eat the rabbit. If he leaves the rabbit and the lettuce, the rabbit will eat the lettuce.)

Remix and put your answer!

Is it this? Take the rabbit across then come back. Take the lettuce across and leave where the rabbit was but bring the rabbit back with you. Go back across and take swap the rabbit for the fox. Take the fox to where the lettuce is and then finally go back and grab the rabbit...and they all lived happily

ever after 😊 -@annie_b
